

Micron (MU)

Investment Research — Summary Report

Investment Summary

Micron offers cyclical exposure to a recovery in memory markets together with a structural AI demand catalyst. The thesis depends on improving supply-demand conditions, pricing discipline and higher-value memory products.

Investment Thesis

- Memory pricing can recover as supply remains disciplined.
- AI servers require significantly more high-performance memory.
- Operating leverage can materially improve earnings during the upcycle.

Potential Catalysts

- DRAM pricing recovery
- HBM demand
- AI data-centre investment

Key Risks

- Semiconductor cycle reversal
- New supply additions
- Customer concentration
